

# **INTRODUCTION**

## **Project overview**

This design view provides an overview of the skill and job recommended for individualities interested in a career in any fields. It discusses the important part that any field plays in businesses and the colorful chops that are necessary for success in this field. It also outlines the different job openings available in any field and the different types of companies that employ any field professionals.

## **Purpose**

Having lots of chops but wondering which job will best suit you? Don't need to worry! we've come up with a skill recommender result through which the fresher or the professed person can login and find the jobs by using hunt option or they can directly interact with the chatbot and get their dream job. To develop an end to end web operation able o displaying the current job openings grounded on the skillset of the druggies. The druggies and their information are stored in the Database. An alert is transferred when there's an opening grounded on the stoner skillset. stoner will interact with the chatbot and can get the recommendations grounded on his chops. We can use job hunt API to get the current job openings in the request which will cost the data directly from the webpage.

## **LITERATURE SURVEY**

## Existing problem

1. Students/Job seekers find their desired job based on their skillset.
2. Integrating Intelligent CHATBOT for job recommendation application.
3. A study of LinkedIn as an Employment Tool for Jobseeker & Recruiter.
4. Cloud storage and sharing services.

## **Problem Statement Definition**

A job seeker trying to find a job, get frustrated when they receive late response from customer support, due to lack of employee which makes a delay in user's process in finding a job. To overcome this issue, we came with a idea of implementing a chatbot in our job recommending system, which will help users in getting personalized response without any delay. This chatbot, not only provides job recommendations but it also solves the issues faced by user. We provide courses that helps the job seekers in improving and developing their skills. We help companies by displaying them employees list of their domain. Helps the companies to directly contact the job seekers.

Culture that isn't receptive to feedback and correction. Making sure that the correct people, with the correct skill set (both technical and soft skills) – is crucial in satisfying customers, doing this builds trust between companies and the customer. Mainly arise in huge and dynamic data sets which is produced by interactions between job seekers and companies such as preferences, ratings and reviews. By improvising chatbot, we can provide personalized information to companies as well as job seekers.

# IDEATION & PROPOSED SOLUTION

## Empathy Map Canvas

# Ideation and Brainstroming

## Conducting a brainstorm for Skill / Job Recommender Application

Having lots of skills but wondering which job will best suit you? Don't need to worry! We have come up with a skill recommender solution through which the fresher or the skilled person can log in and find the jobs by using the search option or they can directly interact with the chatbot and get their dream job.

To develop an end-to-end web application capable of displaying the current job openings based on the user skillset. The user and their information are stored in the Database. An alert is sent when there is an opening based on the user skillset. Users will interact with the chatbot and can get the recommendations based on their skills. We can use a job search API to get the current job openings in the market which will fetch the data directly from the webpage.

- 🕒 15 minutes to prepare
- 🕒 30-60 minutes to collaborate
- 👤 3-8 people recommended

[Share template feedback](#)

### Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 15 minutes

#### A Team Congregation

Assembling the team members for assigning the task.

#### B Brainstroming

Collecting the ideas from team members

#### C Group Ideas

Have everyone move their ideas into the "group sharing space" within the template and have the team silently read through them. As a team, sort and group them by thematic topics or similarities. Discuss and answer any questions that arise. Encourage "Yes, and..." and build on the ideas of other people along the way.

#### D Decide your focus by voting

Give each person two icons to vote which idea should your team focus on.

### 1 Define problem statement

Share the top brainstorm questions that you created and let the group determine where to begin by selecting one question to move forward with based on what seems to be the most promising for idea generation in the areas you are trying to impact.

🕒 10 minutes

#### QUESTION

How might we...make a accessible chatbox and high fidelity application?

#### QUESTION

How might we... make a recommender that sends personalized job or internship recommendations?

#### Key rules of brainstorming

To run an smooth and productive session

Stay in topic.

Encourage wild ideas.

Defer judgment.

Listen to others.

Go for volume.

If possible, be visual.

# Proposed Solution

Team ID	PNT2022TMID01390
Project Name	Skill/Job Recommender Application

## Proposed Solution:

S.No	Parameter	Description
1.	(Problem to Problem Statement be solved)	<ul style="list-style-type: none"> <li>A job seeker trying to find a job, get frustrated when they receive late response from customer support, due to lack of employee which makes a delay in user's process in finding a job.</li> </ul>
2.	Idea / Solution description	<ul style="list-style-type: none"> <li>To overcome this issue, we came with a idea of implementing a chatbot in our job recommending system, which will help users in getting personalized response without any delay.</li> </ul>
3.	Novelty / Uniqueness	<ul style="list-style-type: none"> <li>This chatbot, not only provides job recommendations but it also solves the issues faced by user.</li> <li>We provide courses that helps the jobseekers in improving and developing their skills.</li> <li>We help companies by displaying the employees list of their domain.</li> <li>Helps the companies to directly contact the job seekers.</li> </ul>
4.	Social Impact / Customer Satisfaction	<ul style="list-style-type: none"> <li>Culture that isn't receptive to feedback and correction.</li> <li>Making sure that the correct people, with the correct skill set (both technical and soft skills) – is crucial in satisfying customers, doing this builds trust between companies and the customer.</li> </ul>
5.	Business Model (Revenue Model)	<ul style="list-style-type: none"> <li>We primarily have sources of revenue models such as talent solutions, marketing solutions, sales solutions, learning solutions</li> </ul>

6.	Scalability of the Solution	<ul style="list-style-type: none"> <li>Mainly arise in huge and dynamic data sets which is produced by interactions between job seekers and companies such as preferences, ratings and reviews.</li> <li>By improvising chatbot, we can provide personalized information to companies as well as job seekers.</li> </ul>

## . Problem Solution Fit

Project Title: Skill and Job Recommender Application

Project Design Phase-I - Solution on Fit Template

Team ID: PNT2022TMID01390

Define CS, fit into CC	<b>1. CUSTOMER SEGMENT(S)</b> Who is your customer? i.e. working parents of 0-5 y.o. kids	<b>6. CUSTOMER CONSTRAINTS</b> What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.	<b>5. AVAILABLE SOLUTIONS</b> Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital notetaking	Explore AS, differentiate
	1. A job hunter trying to search for a job, but due to late response from customer support make them move things slowly. 2. Hiring Manager, who is seeking for remote employees with good technical skills	When the user wants to list a customized job list or feels confused, they can just chat with the chatbot which would guide them throughout the process instead of sending mail and waiting for customer support	<b>PROS</b> 1. Stay Connected and Get Employed 2. Give prominence to your brands 3. Promote your skill set 4. Gain exposure to prospective employers/recruiters 5. Demonstrate your knowledge 6. Follow companies or industries and as a search tool 7. Vast and large job listings 8. Publicity 9. Ease of resume update	
Focus on J&P, tap into BE, understand RC	<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one; explore different sides.	<b>9. PROBLEM ROOT CAUSE</b> What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations.	<b>7. BEHAVIOUR</b> What does your customer do to address the problem and get the job done? i.e. directly related: find the right solar panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)	Focus on J&P, tap into BE, understand RC
	• Secure users from spam by verifying every job seekers and hiring managers • Some solutions for user's problems are not available in the chatbot which makes users get frustrated and make their process slow by contacting through email	• Fake IDs and not good verification makes this problem to arise • The root problem for this is lack of information, we must update and make the chatbot more accessible.	• Users privacy can be protected by going on private mode • They contact customer support by mailing or calling the customer support and get help and solve their problem. With this information, we can update the chatbot.	
Identify strong TR & EM	<b>3. TRIGGERS</b> What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news. Users when exposed to spam may close the account and lose hope	<b>10. YOUR SOLUTION</b> If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.	<b>8. CHANNELS of BEHAVIOUR</b> <b>8.1 ONLINE</b> What kind of actions do customers take online? Extract online channels from #7 <b>8.2 OFFLINE</b> What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development.	Identify strong TR & EM
	<b>4. EMOTIONS: BEFORE / AFTER</b> How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design. They feel insecure and lose their confident when they are exposed to spam but can take measures by contacting customer support	Can be solved by verifying the hiring managers and job seekers and their e-mail ID. And updating the chatbot with all user problems	8.1. They seek jobs by using search filters and following the top companies they need to get hired and apply to their desired job 8.2. They go directly for walk-in interviews	

## 4.REQUIREMENT ANALYSIS

### 4.1 Function Requirement

#### Software Required:

Python, Flask, Docker

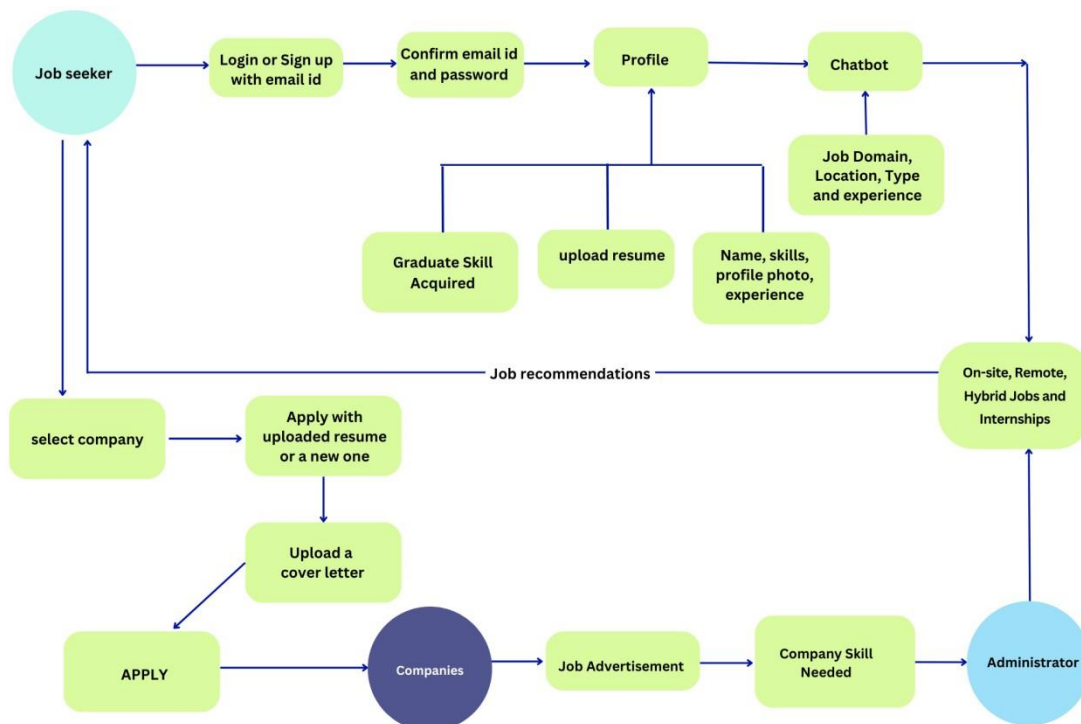

### 4.2 Non-Function Requirement

#### System Required :

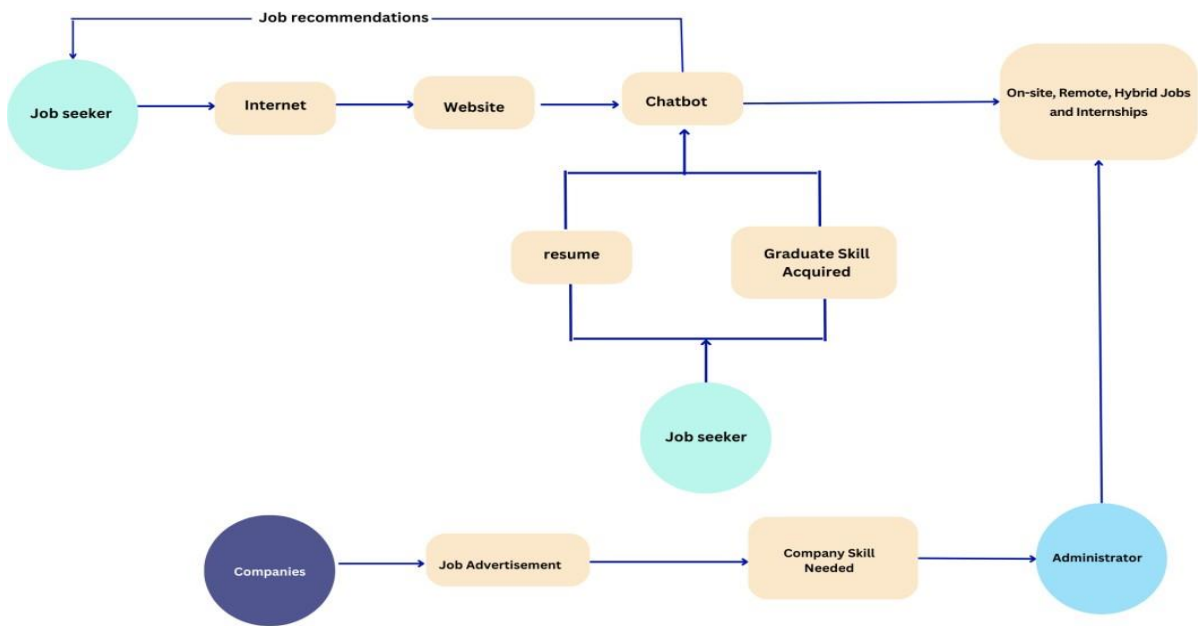

8GB RAM, Intel Core i3, OS-Windows/Linux/MAC ,Laptop or Desktop

## 5. PROJECT DESIGN

### 5.1 Data Flow Diagrams

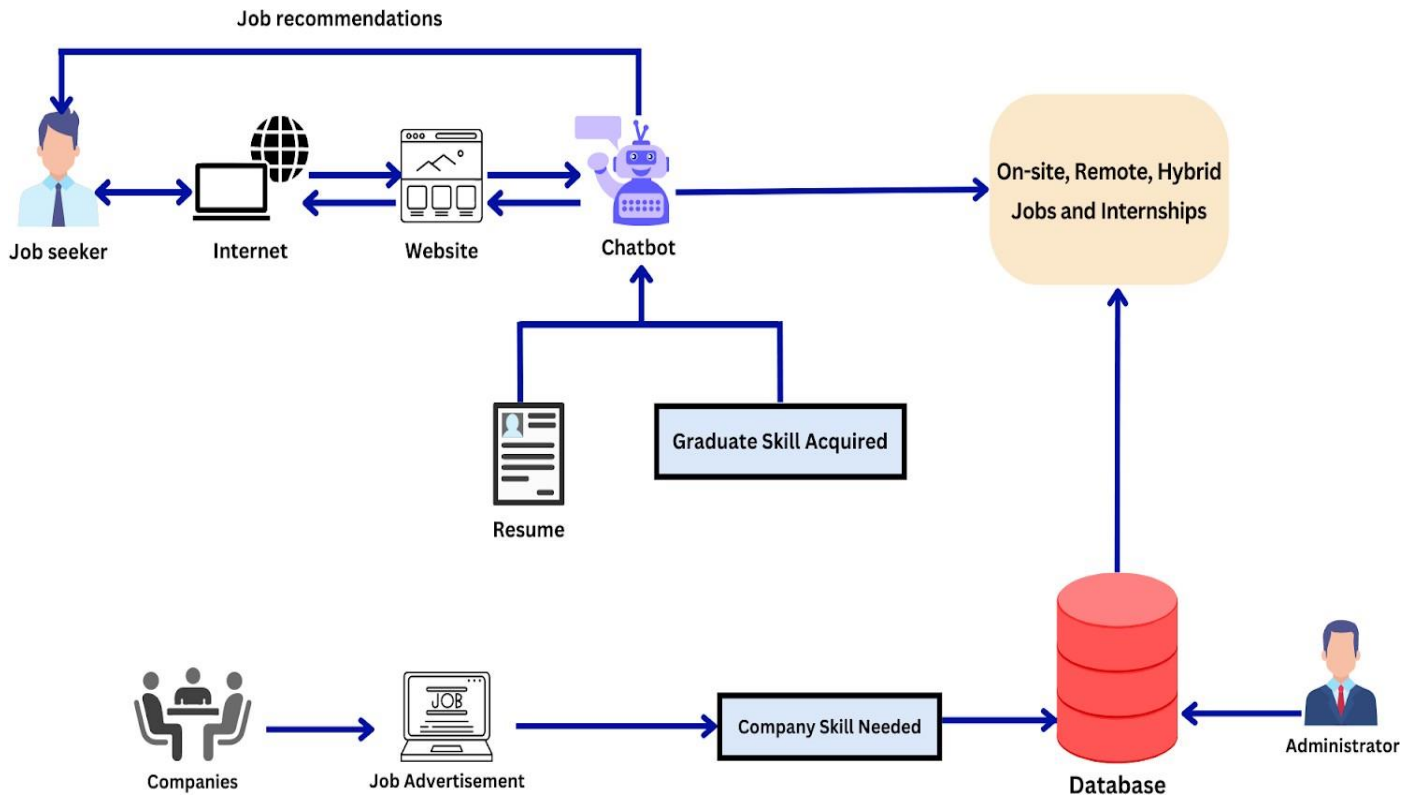

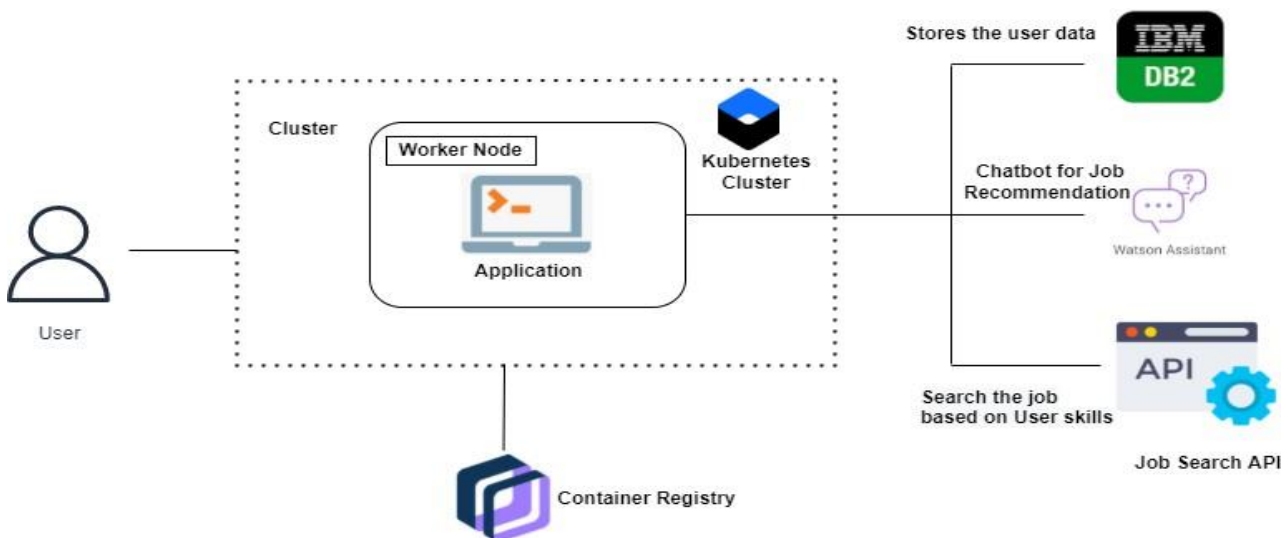

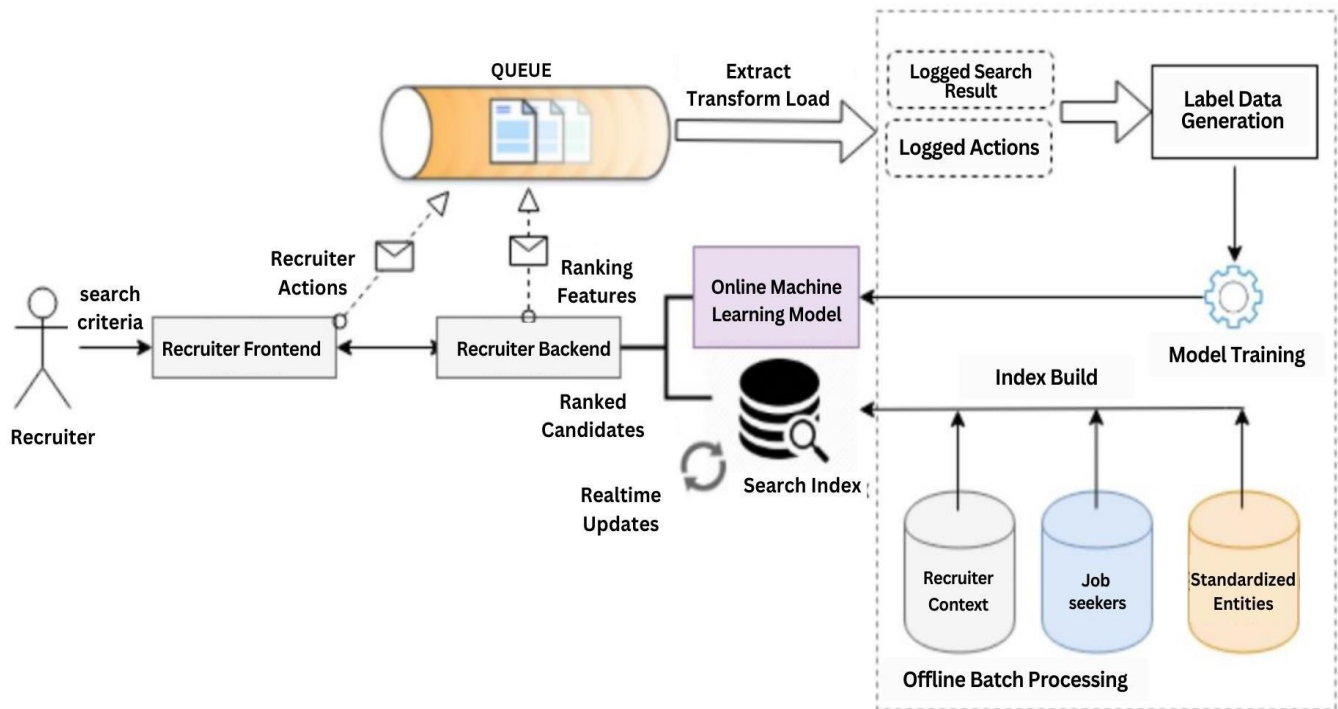

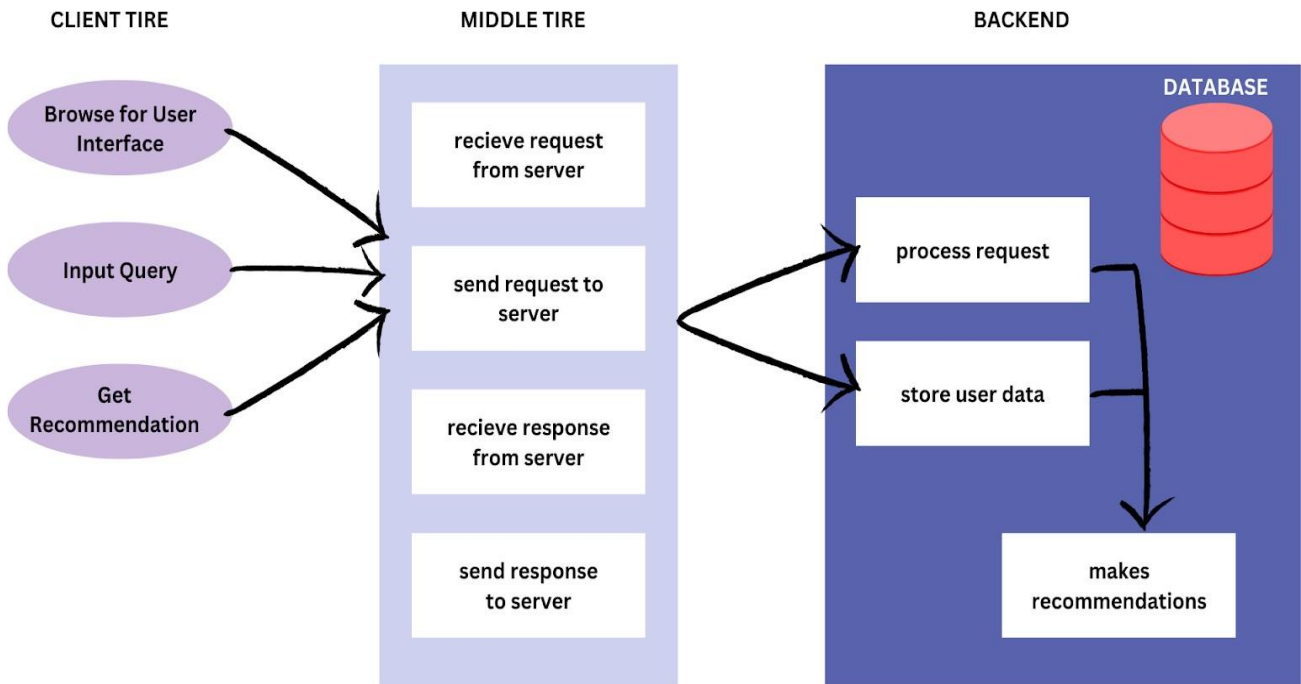

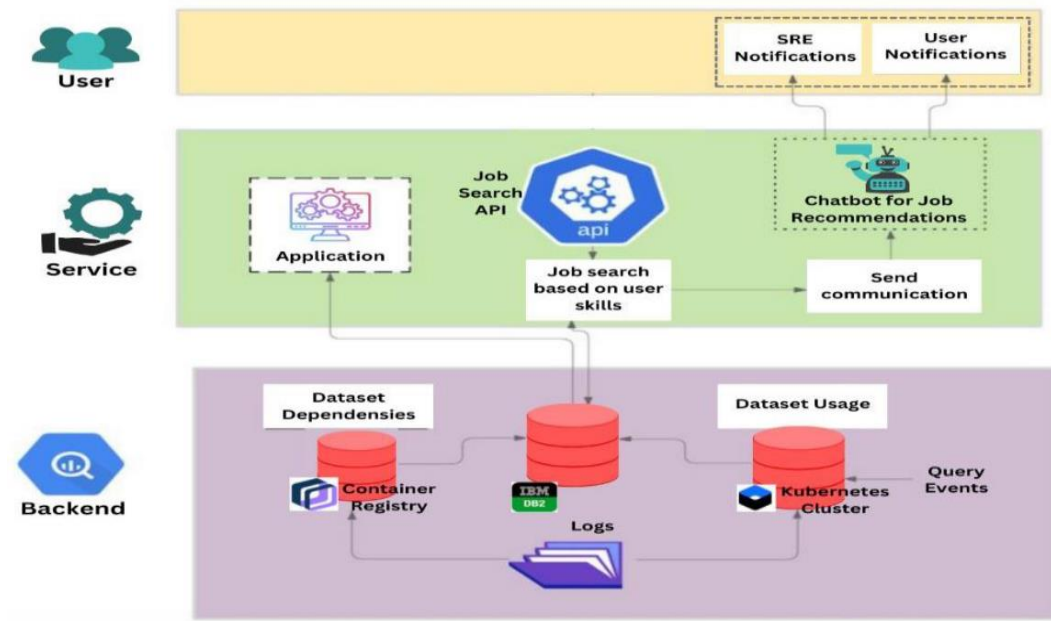

## Solution & Technical Architecture

### SOLUTION ARCHITECTURE

# TECHNICAL ARCHITECTURE

## User Stories :

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a job seeker, I can register for the application by entering my e-mail id, username and password.	I can receive confirmation for email id and access my profile and account.	High	Sprint-1
		USN-2	As a job seeker, I will receive Confirmation e-mail once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a job seeker, I can register for the application through Mobile number	I can register & apply through Mobile Number	Medium	Sprint-1
		USN-4	As a job seeker, I can register for the application through Google Account	I can register & apply through Google Account	Medium	Sprint-1
	Login	USN-5	As a job seeker, I can log into	I can access my profile and	High	Sprint-1

			the application by entering email or username and password	dashboard		
		USN-6	As a job seeker, I can log in through Google Account	I can access my profile and dashboard	High	Sprint-1
		USN-5	As a job seeker, I can log into the application by entering mobile number & password	I can access my profile and dashboard	High	Sprint-1
	Dashboard	USN-6	As a job seeker, I can log into my account through mobile application	I can access my profile and dashboard	High	Sprint-1
Customer (Web user)	Registration	USN-7	As a job seeker, I can register for the application by entering my email, password, and confirming my password	I can access my profile and dashboard	High	Sprint-1
		USN-8	As a job seeker, I will receive confirmation once I have registered for the application	I can receive confirmation and click confirm	High	Sprint-1
		USN-9	As a job seeker, I can register for the application through Mobile number	I can receive confirmation and click confirm	Low	Sprint-2
		USN-10	As a job seeker, I can upload a Profile photo and add my resume, skills, certifications and get recommendations from chatbot.	I can edit and update my Profile photo, Name, skills, certifications and apply for the eligible companies	Medium	Sprint-1
Customer Care Executive	Customer Support	USN-11	As a customer care executive, I can support users by handling their queries and issues.	I can support users by solving their issues.	High	Sprint-1

Administ rator	Responsibili ty	USN-12	As a system administrator, I can add new job seekers and companies when required.	I can add new job seekers and companies	High	Sprint - 1
-------------------	--------------------	--------	--	---	------	---------------

## PROJECT PLANNING & SCHEDULING

### 4.1 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Job Seeker	USN-1	The candidate will get the job recommendation according to their application.	20	High	Swetha A R Shobika R Tricia L C Shiny Sherlee P
Sprint-2	Application	USN-2	Collects the candidates request and skills to recommend the oppertunities for the job seeker.	20	High	Swetha A R Shobika R Tricia L C Shiny Sherlee P
Sprint-3	Chatbot	USN-3	The candidate can directly communicate with the chatbot if they have any confusion about the application. Get the recommendations based on information provided by the company	20	High	Swetha A R Shobika R Tricia L C Shiny Sherlee P
Sprint-4	Candidate goal	USN-4	Container of the applications using docker, Kubernetes and deployment of the application. Create the documentation and final submit the application	20	High	Swetha A R Shobika R Tricia L C Shiny Sherlee P

### 4.2 Sprint Delivery Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date(Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	19 Nov 2022

## Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

### 4.3 Report from JIRA

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

## 4. Coding & Solutions

if __name__ == "__main__":  
    SendEmail(to_email=input("Email address to send to? "))
```

## **RESULTS:**

As anticipated, the job was successfully finished. We made sure the database was created and properly integrated with our project. The anticipated outcomes were obtained.

## **ADVANTAGES & DISADVANTAGES**

### **Advantages:**

- ❖ Based on their skill set, someone looking for work can quickly find a position that suits them.
- ❖ A person can take an eligibility exam to determine their eligibility.
- ❖ Most recruiters choose the right candidate based on the scores they received on the eligibility tests

### **Disadvantages:**

- ❖ Job of Person The eligibility check may have technical issues.
- ❖ Contacting recruiters directly may be challenging for job seekers.
- ❖ Identity theft danger. You must provide a tonne of

personal information in your profile for the eyes of potential employers.

## **CONCLUSION**

The program was created to simplify the job hunt.

We created an application that is easy to use. Based on their skill set, a user can quickly obtain employment. The use of this application benefits the jobseeker without a doubt. Additionally, Chatbot was put into use with the aid of IBM Watson. When organizations and job seekers run into problems, the chatbot offers assistance.

## **FUTURE SCOPE**

To locate a job and maintain professional connections, use the popular program linked in. Both organizations and job seekers use linked in to locate employment. Future opportunities to improve our project and make it more like LinkedIn abound
